

UNITED AIR LINES NEW TYPE HIGH SPEED BOEING TRANSPORT

20 Hours Coast to Coast via UNITED AIR LINES

WESTBOUND FLIGHTS SLIGHTLY LONGER DUE TO PREVAILING WINDS

Mailed from the Dome of the
TRAVEL AND TRANSPORT BUILDING
A CENTURY OF PROGRESS, CHICAGO

TODAY I inspected one of the planes used in the world's fastest multi-motored passenger-mail-express plane service.—a sister ship of the one pictured on the reverse side. Sixty of these new type all-metal Boeing monoplanes are in service on United Air Lines' various routes.

Powered with two 550 h. p. supercharged Wasp engines, they have a high speed of more than three miles a minute. They carry ten passengers, two pilots and stewardess and baggage, mail and express and can climb, fully loaded, 1320 feet per minute and to 10,000 feet in eleven minutes. They incorporate new features of comfort, speed, strength and power.
